3 Introduction

3.1 Purpose and Scope of the Document

This document is the implementation guideline for the ACI ACRIS Seamless Travel data model and the RESTful Web service standard definition. It has been developed by ACI ACRIS Seamless Travel project members and has been reviewed and agreed upon by the ACI ACRIS Working Group.

It is designed to help airports, airlines and other aviation related companies to implement the defined data model and RESTful Web services according to the standardized definition.

This guide will help to understand the relations between the different parts of the data model and the meaning of the defined interfaces and their parameters.

3.2 Out of Scope

This document does not describe the following items:

- The programming language and environment for implementing the Web services
- Legal relationships between partners for the data exchange
- A common central provider for data hosting or transmission
- Definition of specific services

3.3 About this Document

The document is structured into 10 sections:

- Section 3: Introduction
This section introduces the guideline document and describes its purpose, the scope, the environment and the condition
- Section 4: The Business Requirements
A short introduction to the project's business requirements containing references to the BR
- Section 5: Infrastructure Layout
This Section describes feasible as well as proven infrastructure layouts to establish connections between partners
- Section 6 & 7: Data Model and Web service definitions
This section describes the RESTful interfaces and underlying data models in detail
- Section 8: Management and further development
This section describes the change management for the standard definition
- Section 9: Points of Contact
Points of contact for further information or change requests
- Section 10: Glossary of Terms

3.4 The ACI ACRIS Working Group

ACRIS is the acronym for “Aviation Community Recommended Information Services”, and is one of the working groups under ACI World. Members of the working group are airports, airlines and vendors.

The purpose of this working group is to define standard data models and web interfaces for exchanging operational and passenger related data between the partners in a standardized way.

For more information on ACI World visit <http://www.aci.aero/>.

For more information on ACI ACRIS Working Group visit: <http://groups.aci.aero/home>.

3.5 Project participants

The following airports, airlines and vendors participated in developing this standard definition:

- Changi Airport
- Fraport
- London Heathrow
- Munich Airport
- Schiphol Group
- Swedavia
- Orlando Airport
- Lufthansa
- ACI World
- Amadeus
- APD
- Barich Inc.
- IATA
- Rockport Software
- Rockwell Collins
- SITA
- T-Systems

3.6 IATA and ACI collaboration

As many players in the aviation industry are interested in efficient and high quality services for their customers, it make sense to define common standards for information exchange and data models. There are well known organizations for the different areas within the aviation industry representing their members but it is also important to think outside the box. IATA has started the “Simplify the Business” (STB) initiative which shares under the roof of the “Travel Communication” project a lot of the goals with ACRIS Seamless Travel. IATA participated in the ACRIS Seamless Travel project from the beginning and the aim is to create an industry wide common standard that is approved and actively used by airport as well as airline representatives.

3.7 Intended Audience

This implementation guideline is intended to be used by airports, airlines, vendors and aviation related companies who are interested to share information in the scope of ACRIS Seamless Travel with the defined data model and Web service interfaces.

Depending on your company, the way of using the defined data model and interfaces can be different. Airports and Airlines could be interested in implementing a Seamless Travel Platform where all partner interfaces are connected and all data is stored.

The question to be raised is: Who should implement the ACI ACRIS Seamless Travel standard and how?

In case of accessing data via the standardized interface all businesses at all sizes are recommended to refer to the standard. When it comes to providing your information to others, here is our recommendation:

| Type of business | Small | Medium | Large |
|--|-----------|---------------------------|--------------|
| Airport | Community | Community or Own Instance | Own Instance |
| Airline | Community | Community or Own Instance | Own Instance |
| Ground Travel Providers | Community | Community | Community |
| Service Providers (e.g. Shops, Restaurants) | Community | Community | Community |

The term Community in this table refers to the possible infrastructure layouts “centralized infrastructure” or “central platform operator” (see Chapter 3).

3.8 Why Implement ACRIS Seamless Travel

You should use and implement the ACI ACRIS Seamless Travel Web services for the following reasons:

- No bilateral negotiation with partners to define data model and interfaces
- Fast implementation by reusing implementation files (i.e. JSON definition files)
- High quality of pre-existing and proven interfaces
- Data exchange with many different partners via one common interface

4 The Business Requirements

All business requirements are described in the Business Requirements Document (BRD). It consists of the following chapters.

1. Introduction and general information
2. Project Background, Scope and Context of ACRIS Seamless Travel
3. Use cases
4. Logical data model description
5. High level interface description
6. Terms and definitions

It is designed to help business people and decision makers from airports and airlines to understand how communication with other airports, airlines and partners via the Seamless Travel interface can improve their own business and the various possibilities for new and innovative ideas.

For detailed information on business requirements please refer to the BRD.

5 Infrastructure Layout

The main purpose of the project is to define the data model and the interfaces. However, to use the interfaces with partners for data exchange, of course there has to be a technical connection between these partners.

The infrastructure layout, more precisely the way to establish a connection, was discussed in the project and defined for prototype implementations, but it is not included in the standard. The following chapters show several possibilities to connect with partners, but currently this connectivity has to be negotiated in every single case, e.g. for each linking of two partners.

All three concepts shown below can be realized with the current version of this standard.

5.1 De-Centralized Infrastructure

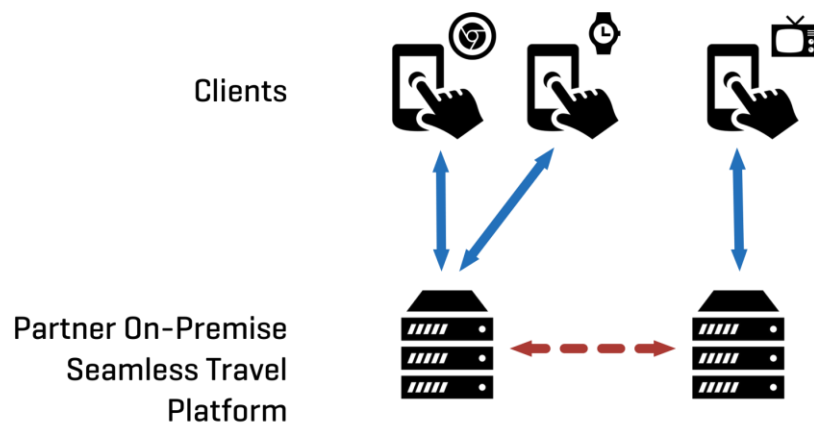

Figure 1: De-Centralized Infrastructure

The De-Centralized infrastructure shown in figure 1 describes a possible scenario where every platform operator has one or more proprietary clients that connect to the operator's server directly. The partners exchange data ad-hoc between their servers to deliver information the other holds.

5.2 Centralized Infrastructure

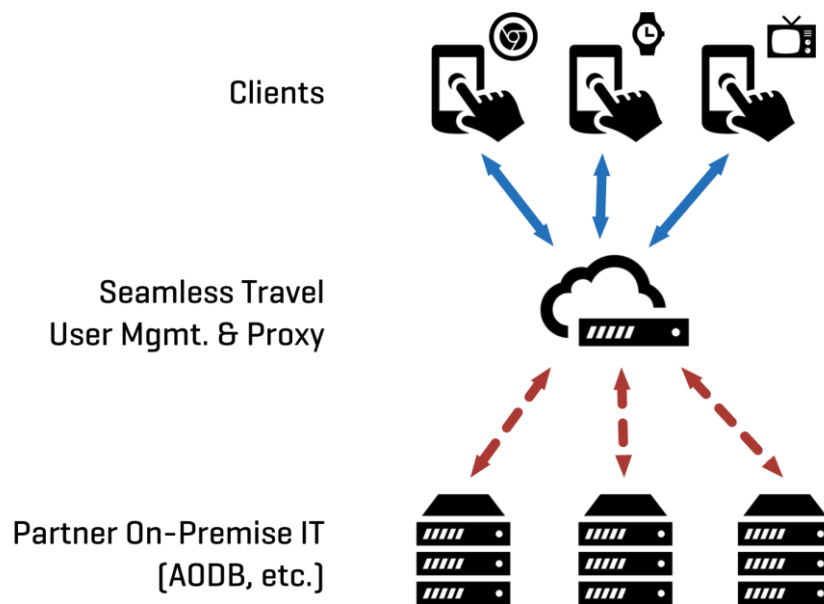

Figure 2: Centralized Infrastructure

Figure 2 shows the concept of a Centralized Infrastructure. In this case one central instance is the connecting point for all clients. Depending on the requested information the call is forwarded (proxied) to the best available source. The central instance can play an additional role: Managing users and contractual details (e.g. permissions, payments, rate limits) between the other participants.

5.3 Central Platform Operator(s)

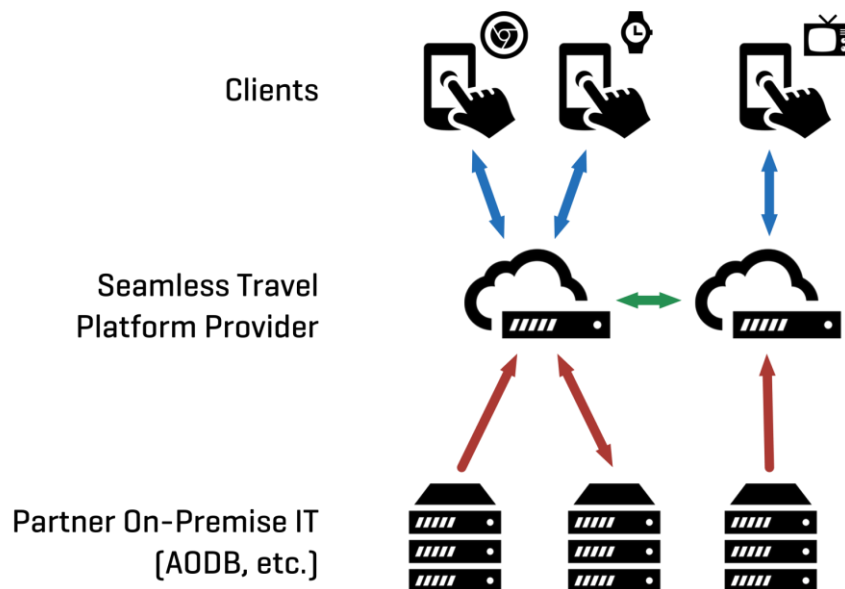

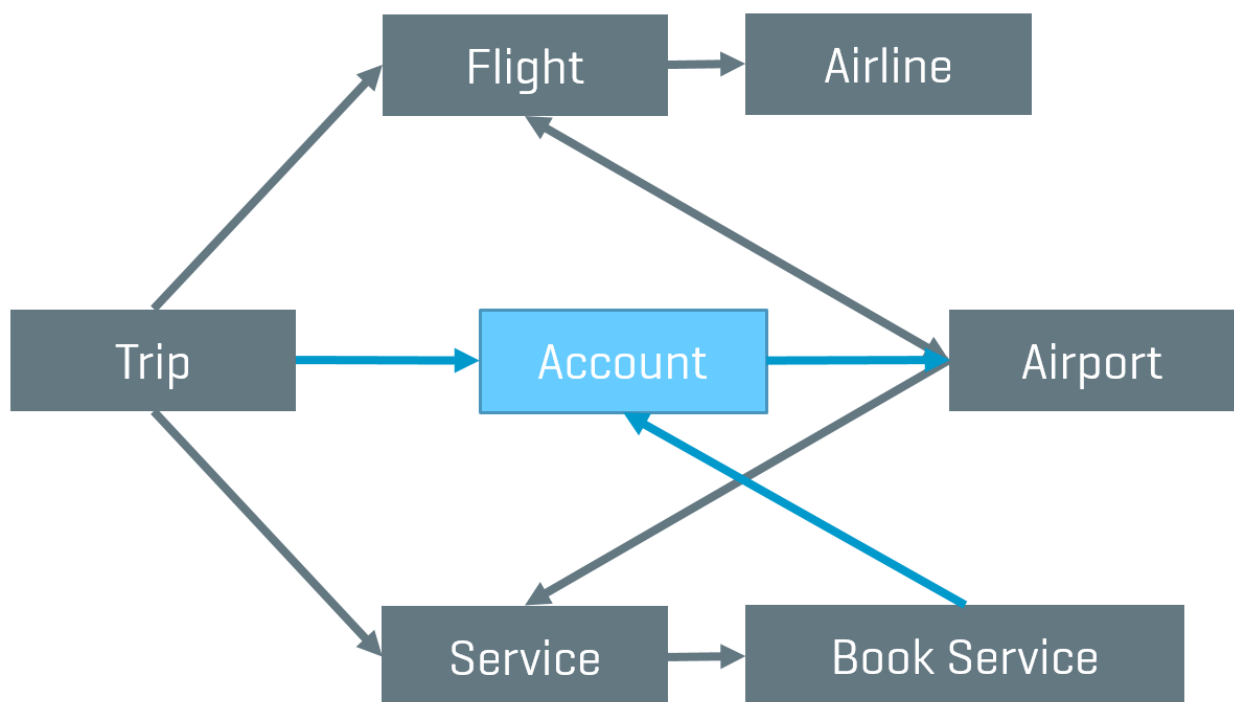

Figure 3: Central Platform Operator(s)

The Central Platform Operator(s) concept shown in figure 3 is a variant of the Centralized Infrastructure. It features more than one connection point for the clients but still handles connections between the platform operators at the bottom.

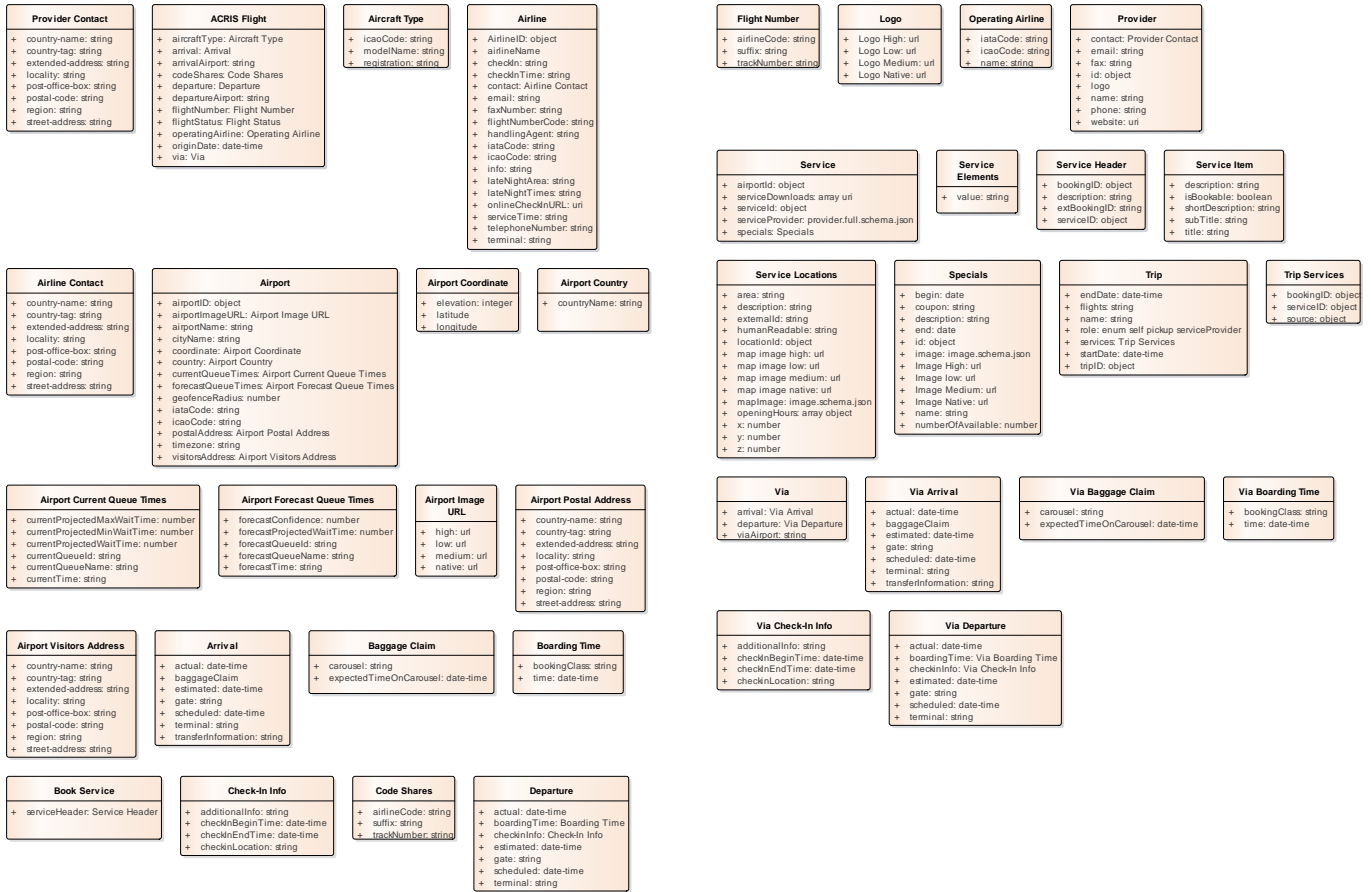

6 Domain Model

The data model forms the basis for all interaction with the Seamless Travel platform. A common understanding of the data model and the exact meaning of every field and term therefore is essential for establishing robust communications. Within this ACRIS standard some data models were defined to be used via the Web service interfaces. The authors are aware that other standards or systems have already defined models that wholly or partially pursue the same aim. Wherever possible the intention was to build upon existing pieces of work, for example AIDX or the SITA queuing API, instead of reinventing the wheel. However, it may still be necessary to translate between already existing systems and the ACRIS by implementing this standard. Nevertheless, the working group is convinced that this is the only way to ensure that partners have the same understanding of terms and avoid different interpretations of data which can lead to misinformation and confusion of the passengers.

The following data models are currently defined:

Within this data model many entities are defined and represent the whole Seamless Travel domain model. The figure shows the whole domain model, the following subchapters are describing the whole data model with all attributes in detail. As the data model is stored and managed in Enterprise Architect, these subchapters are showing the Enterprise Architect export.

7 Domain Models and Interfaces

7.1 Flight

7.1.1 Interfaces

7.1.1.1 API for Flight API documentation version v1

<https://{serverName}/{appName}-{version}>

7.1.1.1.1 GetFlightDetails

[/flightDetails/{airlineCode}/{flightNumber}/{origin_flight_date}/{dep_airport_code}/{arr_airport_code}](#)

- **get** (*secured*): Returns the details for a single flight with the given ID. The path parameters follows the AIDX unique flight id format.

7.1.1.1.2 /flight/{airport}/arrival

The default resource type for all flight requests

[/flight/{airport}/arrival](#)

- **get** (*secured*): Returns a list of arriving flights ordered by scheduled arrival time

7.1.1.1.3 /flight/{airport}/departure

The default resource type for all flight requests

[/flight/{airport}/departure](#)

- **get** (*secured*): Returns a list of departing flights ordered by scheduled arrival time

7.1.2 Models

7.1.2.1 ACRISFlight

The flight in stp app services

Properties

| | Type | Description | Required |
|-------------------------|-----------------|---|----------|
| operatingAirline | object | The airline operating the flight. Either IATA or ICAO must be present | Yes |
| aircraftType | object | The aircraft-type information | No |
| flightNumber | object | The status representation of a flight | No |
| codeShares | object[] | The code-shares associated with the flight | No |
| departureAirport | string | The departure airport as IATA format | No |
| arrivalAirport | string | The arrival airport as IATA format | No |

| | | | |
|---------------------|-----------------|--|-----|
| originDate | string | Date expressed in UTC. Time element is not used. This date MUST not change once initialized. For a flight SFO-DEN-LHR both flight legs SFO-DEN and DEN-LHR will have the origin date of the SFO departing date (example 2015-10-15). | No |
| departure | object | The departure information for the flight | No |
| arrival | object | The arrival information for the flight. | No |
| flightStatus | string | The status of the flight | Yes |
| via | object[] | A list of airports and the corresponding arrival and departure information for stops during the flight. The order in the array represents the flight order. | No |

Additional properties are allowed.

7.1.2.1.1 `ACRISFlight.operatingAirline`

The airline operating the flight. Either IATA or ICAO must be present

- **Type:** `object`
- **Required:** Yes

7.1.2.1.2 `ACRISFlight.aircraftType`

The aircraft-type information

- **Type:** `object`
- **Required:** No

7.1.2.1.3 `ACRISFlight.flightNumber`

The status representation of a flight

- **Type:** `object`
- **Required:** No

7.1.2.1.4 `ACRISFlight.codeShares`

The code-shares associated with the flight

- **Type:** `object[]`
- **Required:** No

7.1.2.1.5 `ACRISFlight.departureAirport`

The departure airport as IATA format

- **Type:** `string`
- **Required:** No

7.1.2.1.6 `ACRISFlight.arrivalAirport`

The arrival airport as IATA format

- **Type:** string
- **Required:** No

7.1.2.1.7 ACRISFlight.originDate

Date expressed in UTC. Time element is not used. This date MUST not change once initialized. For a flight SFO-DEN-LHR both flight legs SFO-DEN and DEN-LHR will have the origin date of the SFO departing date (example 2015-10-15).

- **Type:** string
- **Required:** No
- **Format:** date-time

7.1.2.1.8 ACRISFlight.departure

The departure information for the flight

- **Type:** object
- **Required:** No

7.1.2.1.9 ACRISFlight.arrival

The arrival information for the flight.

- **Type:** object
- **Required:** No

7.1.2.1.10 ACRISFlight.flightStatus

The status of the flight

- **Type:** string
- **Required:** Yes
- **Allowed values:** "Canceled", "Diverted", "Scheduled", "Boarding", "GateClosed", "Departed", "InApproach", "Landed", "BagClaimStarted", "FlightFinished"

7.1.2.1.11 ACRISFlight.via

A list of airports and the corresponding arrival and departure information for stops during the flight. The order in the array represents the flight order.

- **Type:** object[]
- **Required:** No

7.1.2.2 ACRISFlightList

A list of flights

7.1.2.3 FlightArrivalInformation

The arrival information for the flight.

Properties

| | Type | Description | Required |
|----------------------------|---------------|--|----------|
| scheduled | string | Scheduled time of arrival including time zone. Format ISO-8601 is used. | Yes |
| estimated | string | Estimated time of arrival including time zone. Format ISO-8601 is used. Every airport should provide the best information he has, corresponding to the FIDS. | No |
| actual | string | Actual time of arrival including time zone. Format ISO-8601 is used. Every airport should provide the best information he has, corresponding to the FIDS. | No |
| terminal | string | The terminal for the flight | No |
| gate | string | The arrival gate for the flight. Depending on the buildings of every airport this could be an gate or area the passenger enters the terminal the first time. | No |
| transferInformation | string | Provide information for your passengers where the nearest transfer desks for this flight can be found. | No |
| baggageClaim | object | | No |

Additional properties are allowed.

7.1.2.3.1 `FlightArrivalInformation.scheduled`

Scheduled time of arrival including time zone. Format ISO-8601 is used.

- **Type:** `string`
- **Required:** Yes
- **Format:** date-time

7.1.2.3.2 `FlightArrivalInformation.estimated`

Estimated time of arrival including time zone. Format ISO-8601 is used. Every airport should provide the best information he has, corresponding to the FIDS.

- **Type:** `string`
- **Required:** No
- **Format:** date-time

7.1.2.3.3 `FlightArrivalInformation.actual`

Actual time of arrival including time zone. Format ISO-8601 is used. Every airport should provide the best information he has, corresponding to the FIDS.

- **Type:** `string`
- **Required:** No
- **Format:** date-time

7.1.2.3.4 `FlightArrivalInformation.terminal`

The terminal for the flight

- **Type:** `string`
- **Required:** No

7.1.2.3.5 `FlightArrivalInformation.gate`

The arrival gate for the flight. Depending on the buildings of every airport this could be an gate or area the passenger enters the terminal the first time.

- **Type:** `string`
- **Required:** No

7.1.2.3.6 `FlightArrivalInformation.transferInformation`

Provide information for your passengers where the nearest transfer desks for this flight can be found.

- **Type:** `string`
- **Required:** No

7.1.2.3.7 `FlightArrivalInformation.baggageClaim`

- **Type:** `object`
- **Required:** No

7.1.2.4 `FlightDepartureInformation`

The departure information for the flight

Properties

| | Type | Description | Required |
|---------------------|-----------------|--|----------|
| scheduled | string | Scheduled time of departure including time zone. Format ISO-8601 is used. | Yes |
| estimated | string | Estimated time of departure including time zone. Format ISO-8601 is used. Every airport should provide the best information he has, corresponding to the FIDS. | No |
| actual | string | Actual time of departure including time zone. Format ISO-8601 is used. Every airport should provide the best information he has, corresponding to the FIDS. | No |
| terminal | string | The terminal for the flight | No |
| gate | string | The gate for the flight | No |
| checkinInfo | object | The check-in information for the passenger | No |
| boardingTime | object[] | A list of airports and the corresponding arrival and departure information for stops during the flight. The order in the array represents the flight order. | No |

Additional properties are allowed.

7.1.2.4.1 `FlightDepartureInformation.scheduled`

Scheduled time of departure including time zone. Format ISO-8601 is used.

- **Type:** `string`
- **Required:** Yes
- **Format:** date-time

7.1.2.4.2 `FlightDepartureInformation.estimated`

Estimated time of departure including time zone. Format ISO-8601 is used. Every airport should provide the best information he has, corresponding to the FIDS.

- **Type:** `string`
- **Required:** No
- **Format:** date-time

7.1.2.4.3 `FlightDepartureInformation.actual`

Actual time of departure including time zone. Format ISO-8601 is used. Every airport should provide the best information he has, corresponding to the FIDS.

- **Type:** `string`
- **Required:** No
- **Format:** date-time

7.1.2.4.4 `FlightDepartureInformation.terminal`

The terminal for the flight

- **Type:** `string`
- **Required:** No

7.1.2.4.5 `FlightDepartureInformation.gate`

The gate for the flight

- **Type:** `string`
- **Required:** No

7.1.2.4.6 `FlightDepartureInformation.checkinInfo`

The check-in information for the passenger

- **Type:** `object`
- **Required:** No

7.1.2.4.7 `FlightDepartureInformation.boardingTime`

A list of airports and the corresponding arrival and departure information for stops during the flight. The order in the array represents the flight order.

- **Type:** `object[]`

- **Required:** No

7.1.2.5 1.2.5. FlightNumber

The status representation of a flight

Properties

| | Type | Description | Required |
|--------------------|---------------|--|----------|
| airlineCode | string | The airlineCode-part of the flight-number (e.g. EI) | Yes |
| trackNumber | string | The tracknumber-part of the flight-number (e.g. 123) | Yes |
| suffix | string | The optional last character of the flight-number. | No |

Additional properties are allowed.

7.1.2.5.1 FlightNumber.airlineCode

The airlineCode-part of the flight-number (e.g. EI)

- **Type:** string
- **Required:** Yes

7.1.2.5.2 FlightNumber.trackNumber

The tracknumber-part of the flight-number (e.g. 123)

- **Type:** string
- **Required:** Yes

7.1.2.5.3 FlightNumber.suffix

The optional last character of the flight-number.

- **Type:** string
- **Required:** No

7.2 Airline

7.2.1 Interfaces

7.2.1.1 API for Airlines API documentation version v1

https://{serverName}/{appName}-{version}

7.2.1.1.1 /detail/{airline_id}

/detail/{airline_id}

- **get (secured):** Returns detailed information for a specific airline

7.2.1.1.2 /airlines

/airlines

- **get** (*secured*): Returns a list of all available airlines for an specific airport. This usually is a list of all the airlines that offer services (operating flights as well as code shares) at the requested source.

7.2.2 Models

7.2.2.1 AirlineFull

The airline's full information object

Properties

| | Type | Description | Required |
|-------------------------|-----------------|--|----------|
| checkIn | string | The check-in area of the airline | No |
| icaoCode | string | The ICAO Code of the airline | Yes |
| terminal | string | The airlines main terminal as comma seperated list | No |
| airlineName | string | | Yes |
| logo | object | Image file - in different resolutions to address different devices and device types | No |
| checkInTime | string | The check-in times of the airline | No |
| lateNightArea | string | The late night check-in areas of the airline | No |
| lateNightTimes | string | The late night check-in times of the airline | No |
| serviceTime | string | The service center opening times of the airline | No |
| handlingAgent | string | The handling agent of the airline | No |
| info | string | Some further information. | No |
| websites | string[] | The internet addresses of the airline | No |
| telephoneNumber | string | The important telephone number of the airline | No |
| faxNumber | string | The fax number of the airline | No |
| email | string | The e-mail address of the airline | No |
| onlineCheckInURL | string | The URL of the online checkin platform | No |
| contact | object | An address following the convention of http://microformats.org/wiki/hcard | Yes |
| airlineID | object | The ID of the airline | Yes |
| iataCode | string | The IATA Code of the airline | Yes |
| flightNumberCode | string | The flight number code (code used towards the passenger, could be IATA or ICAO format) of the airline | Yes |

Additional properties are allowed.

7.2.2.1.1 AirlineFull.checkIn

The check-in area of the airline

- **Type:** string
- **Required:** No

7.2.2.1.2 AirlineFull.icaoCode

The ICAO Code of the airline

- **Type:** string
- **Required:** Yes

7.2.2.1.3 AirlineFull.terminal

The airlines main terminal as comma seperated list

- **Type:** string
- **Required:** No

7.2.2.1.4 AirlineFull.airlineName

- **Type:** string
- **Required:** Yes

7.2.2.1.5 AirlineFull.logo

Image file - in different resolutions to address different devices and device types

- **Type:** object
- **Required:** No

7.2.2.1.6 AirlineFull.checkInTime

The check-in times of the airline

- **Type:** string
- **Required:** No

7.2.2.1.7 AirlineFull.lateNightArea

The late night check-in areas of the airline

- **Type:** string
- **Required:** No

7.2.2.1.8 AirlineFull.lateNightTimes

The late night check-in times of the airline

- **Type:** string
- **Required:** No

7.2.2.1.9 AirlineFull.serviceTime

The service center opening times of the airline

- **Type:** string
- **Required:** No

7.2.2.1.10 AirlineFull.handlingAgent

The handling agent of the airline

- **Type:** string
- **Required:** No

7.2.2.1.11 AirlineFull.info

Some further information.

- **Type:** string
- **Required:** No

7.2.2.1.12 AirlineFull.websites

The internet addresses of the airline

- **Type:** string[]
- **Required:** No

7.2.2.1.13 AirlineFull.telephoneNumber

The important telephone number of the airline

- **Type:** string
- **Required:** No

7.2.2.1.14 AirlineFull.faxNumber

The fax number of the airline

- **Type:** string
- **Required:** No

7.2.2.1.15 AirlineFull.email

The e-mail address of the airline

- **Type:** string
- **Required:** No

7.2.2.1.16 AirlineFull.onlineCheckInURL

The URL of the online checkin platform

- **Type:** string
- **Required:** No
- **Format:** uri

7.2.2.1.17 AirlineFull.contact

An address following the convention of <http://microformats.org/wiki/hcard>

- **Type:** object
- **Required:** Yes

7.2.2.1.18 AirlineFull.airlineID

The ID of the airline

- **Type:** object
- **Required:** Yes

7.2.2.1.19 AirlineFull.iataCode

The IATA Code of the airline

- **Type:** string
- **Required:** Yes

7.2.2.1.20 AirlineFull.flightNumberCode

The flight number code (code used towards the passenger, could be IATA or ICAO format) of the airline

- **Type:** string
- **Required:** Yes

7.2.2.2 AirlineShort

The short airline Object

Properties

| | Type | Description | Required |
|-------------------------|---------------|---|----------|
| airlineID | object | The ID of the airline | Yes |
| iataCode | string | The IATA Code of the airline | Yes |
| flightNumberCode | string | The flight number code (code used towards the passenger, could be IATA or ICAO format) of the airline | Yes |

Additional properties are allowed.

7.2.2.2.1 AirlineShort.airlineID

The ID of the airline

- **Type:** object
- **Required:** Yes

7.2.2.2.2 AirlineShort.iataCode

The IATA Code of the airline

- **Type:** string
- **Required:** Yes

7.2.2.2.3 AirlineShort.flightNumberCode

The flight number code (code used towards the passenger, could be IATA or ICAO format) of the airline

- **Type:** string
- **Required:** Yes

7.2.2.3 AirlineList

The list of all airlines

Properties

| | Type | Description | Required |
|-----------------|-----------------|-------------------|----------|
| airlines | object[] | The airline items | No |

Additional properties are allowed.

7.2.2.3.1 AirlineList.airlines

The airline items

- **Type:** object[]
- **Required:** No

7.3 Airport

7.3.1 Interfaces

7.3.1.1 API for Airport API documentation version v1

https://{serverName}/{appName}-{version}

7.3.1.1.1 /detail/{airportID}/

GET returns detailed information about a specific airport

[/detail/{airportID}/](#)

- **get (secured):** Returns detailed information about a specific airport

7.3.1.1.2 /detail/iata/{iataCode}/

GET returns detailed information of an active airport for the specified IATA code

[/detail/iata/{iataCode}/](#)

- **get (secured):** Returns detailed information of an active airport for the specified IATA code

7.3.1.1.3 /detail/icao/{icaoCode}/

GET returns detailed information of an active airport for the specified ICAO code

[/detail/icao/{icaoCode}/](#)

- **get (secured)**: Returns detailed information of an active airport for the specified ICAO code

7.3.1.1.4 [/airports](#)

GET returns all active airports

[/airports](#)

- **get (secured)**: Returns all active airports

7.3.1.1.5 [airportInfo](#)

GET returns specified airport's information

[/airportInfo/{airportInfoId}](#)

- **get (secured)**: Returns specified airport's information

7.3.1.1.6 [airportInfos](#)

GET returns all information about the specified airport

[/airportInfos/{airportId}](#)

- **get (secured)**: Returns all information about the specified airport

7.3.2 Models

7.3.2.1 AirportFull

The airport object in the app

Properties

| | Type | Description | Required |
|------------------------|-----------------|---|----------|
| icaoCode | string | The ICAO Code of the airport | Yes |
| coordinate | object | The coordinates of the airport (WGS84) | No |
| geofenceRadius | number | The radius around the coordinate in which the airport lies in meters. | No |
| visitorsAddress | object | An address following the convention of http://microformats.org/wiki/hcard | Yes |
| postalAddress | object | An address following the convention of http://microformats.org/wiki/hcard | Yes |
| airportImageURL | object | Image file - in different resolutions to address different devices and device types | No |
| timezone | string | Time zone of the current airport, according to tz database, see https://en.wikipedia.org/wiki/List_of_tz_database_time_zones | No |
| websites | string[] | Internet addresses of the airport | No |

| | | | |
|------------------------|---------------|--|-----|
| telephoneNumber | string | The most important telephone number of the airport | No |
| email | string | The e-mail address of the airport | No |
| queueTimes | object | The waiting queue object | No |
| airportID | object | The airport's ID | Yes |
| iataCode | string | The airport's iata code | Yes |
| cityName | string | The airport's city name (same as visitor-city-name) in the selected language | No |
| country | object | The counry the airport belongs to. | No |
| airportName | string | The airports name | No |

Additional properties are allowed.

7.3.2.1.1 [AirportFull.icaoCode](#)

The ICAO Code of the airport

- **Type:** **string**
- **Required:** Yes

7.3.2.1.2 [AirportFull.coordinate](#)

The coordinates of the airport (WGS84)

- **Type:** **object**
- **Required:** No

7.3.2.1.3 [AirportFull.geofenceRadius](#)

The radius around the coordinate in which the airport lies in meters.

- **Type:** **number**
- **Required:** No

7.3.2.1.4 [AirportFull.visitorsAddress](#)

An address following the convention of <http://microformats.org/wiki/hcard>

- **Type:** **object**
- **Required:** Yes

7.3.2.1.5 [AirportFull.postalAddress](#)

An address following the convention of <http://microformats.org/wiki/hcard>

- **Type:** **object**
- **Required:** Yes

7.3.2.1.6 [AirportFull.airportImageURL](#)

Image file - in different resolutions to address different devices and device types

- **Type:** **object**

- **Required:** No

7.3.2.1.7 AirportFull.timezone

Time zone of the current airport, according to tz database, see https://en.wikipedia.org/wiki/List_of_tz_database_time_zones

- **Type:** string
- **Required:** No

7.3.2.1.8 AirportFull.websites

Internet addresses of the airport

- **Type:** string[]
- **Required:** No

7.3.2.1.9 AirportFull.telephoneNumber

The most important telephone number of the airport

- **Type:** string
- **Required:** No

7.3.2.1.10 AirportFull.email

The e-mail address of the airport

- **Type:** string
- **Required:** No

7.3.2.1.11 AirportFull.queueTimes

The waiting queue object

- **Type:** object
- **Required:** No

7.3.2.1.12 AirportFull.airportID

The airport's ID

- **Type:** object
- **Required:** Yes

7.3.2.1.13 AirportFull.iataCode

The airport's iata code

- **Type:** string
- **Required:** Yes

7.3.2.1.14 AirportFull.cityName

The airport's city name (same as visitor-city-name) in the selected language

- **Type:** string

- **Required:** No

7.3.2.1.15 AirportFull.country

The counry the airport belongs to.

- **Type:** object
- **Required:** No

7.3.2.1.16 AirportFull.airportName

The airports name

- **Type:** string
- **Required:** No

7.3.2.2 AirportShort

The airport Object represents the short representation of the airport in STP app-service

Properties

| | Type | Description | Required |
|--------------------|---------------|--|----------|
| airportID | object | The airport's ID | Yes |
| iataCode | string | The airport's iata code | Yes |
| cityName | string | The airport's city name (same as visitor-city-name) in the selected language | No |
| country | object | The counry the airport belongs to. | No |
| airportName | string | The airports name | No |

Additional properties are allowed.

7.3.2.2.1 AirportShort.airportID

The airport's ID

- **Type:** object
- **Required:** Yes

7.3.2.2.2 AirportShort.iataCode

The airport's iata code

- **Type:** string
- **Required:** Yes

7.3.2.2.3 AirportShort.cityName

The airport's city name (same as visitor-city-name) in the selected language

- **Type:** string
- **Required:** No

7.3.2.2.4 AirportShort.country

The country the airport belongs to.

- **Type:** object
- **Required:** No

7.3.2.2.5 AirportShort.airportName

The airport's name

- **Type:** string
- **Required:** No

7.3.2.3 AirportInfo

The airport information object

Properties

| | Type | Description | Required |
|-------------------|-----------------|--|----------|
| infoId | object | The ID of the info | Yes |
| valid_from | string | The begin date of the validity of the security infos | No |
| valid_to | string | The end date of the validity of the security infos | No |
| created | string | The creation timestamp of the security infos | No |
| title | string | The title of one security info | No |
| infoType | string | The level of the security info | No |
| message | string | The text of one security info | No |
| urls | string[] | Array of links to external information | No |

Additional properties are allowed.

7.3.2.3.1 AirportInfo.infoId

The ID of the info

- **Type:** object
- **Required:** Yes

7.3.2.3.2 AirportInfo.valid_from

The begin date of the validity of the security infos

- **Type:** string
- **Required:** No
- **Format:** date-time

7.3.2.3.3 AirportInfo.valid_to

The end date of the validity of the security infos

- **Type:** string

- **Required:** No
- **Format:** date-time

7.3.2.3.4 `AirportInfo.created`

The creation timestamp of the security infos

- **Type:** string
- **Required:** No
- **Format:** date-time

7.3.2.3.5 `AirportInfo.title`

The title of one security info

- **Type:** string
- **Required:** No

7.3.2.3.6 `AirportInfo.infoType`

The level of the security info

- **Type:** string
- **Required:** No
- **Allowed values:** "MESSAGE", "INFO", "WARNING", "EMERGENCY"

7.3.2.3.7 `AirportInfo.message`

The text of one security info

- **Type:** string
- **Required:** No

7.3.2.3.8 `AirportInfo.urls`

Array of links to external information

- **Type:** string[]
- **Required:** No

7.3.2.4 `AirportInfoList`

The list of airports

Properties

| | Type | Description | Required |
|-----------------|-----------------|-------------------------------|----------|
| airports | object[] | The list of all airport infos | No |

Additional properties are allowed.

7.3.2.4.1 `AirportInfoList.airports`

The list of all airport infos

- **Type:** `object[]`
- **Required:** No

7.3.2.5 AirportList

The list of airports

Properties

| | Type | Description | Required |
|-----------------|-----------------|---------------------------------|----------|
| airports | object[] | The list of all active airports | No |

Additional properties are allowed.

7.3.2.5.1 AirportList.airports

The list of all active airports

- **Type:** `object[]`
- **Required:** No

7.3.2.6 AirportQueue

The waiting queue object

Properties

| | Type | Description | Required |
|-----------------|-----------------|--|----------|
| current | object[] | This array describes the current situation at airport queues | No |
| forecast | object[] | This array gives an estimation / forecast for the waiting time at airport queues at specific times (e.g. every 15 min for the next 4 hours, every 1 hr for the next day) | No |

Additional properties are allowed.

7.3.2.6.1 AirportQueue.current

This array describes the current situation at airport queues

- **Type:** `object[]`
- **Required:** No

7.3.2.6.2 AirportQueue.forecast

This array gives an estimation / forecast for the waiting time at airport queues at specific times (e.g. every 15 min for the next 4 hours, every 1 hr for the next day)

- **Type:** `object[]`
- **Required:** No

7.4 BookService

7.4.1 Interfaces

7.4.1.1 Booking a Service API documentation version v1

<https://{serverName}/{appName}-{version}>

7.4.1.1.1 /bookingElements

[/bookingElements](#)

- **post (secured)**: Fetches the next booking data by posting the previous elements (if available)

7.4.1.1.2 /serviceBooking/{bookingid}

[/serviceBooking/{bookingid}](#)

- **put (secured)**: Register a certain booking request (i.e. complete the booking process)
- **delete (secured)**: Cancel a certain booking request
- **post (secured)**: make a change to a certain booking request
- **get (secured)**: Get the booking status

7.4.2 Models

7.4.2.1 BookingDataRequest

Booking request data

Properties

| | Type | Description | Required |
|------------------------|---------------|-----------------------------------|----------|
| serviceHeader | object | Meta data for the booking process | No |
| serviceFormPage | object | One page of the booking data | No |

Additional properties are allowed.

7.4.2.1.1 BookingDataRequest.serviceHeader

Meta data for the booking process

- **Type: object**
- **Required: No**

7.4.2.1.2 BookingDataRequest.serviceFormPage

One page of the booking data

- **Type: object**
- **Required: No**

7.4.2.2 BookingDataResponse

Booking response data

Properties

| | Type | Description | Required |
|-------------------------|---------------|---|----------|
| serviceHeader | object | Meta data for the booking process | No |
| serviceFormPage | object | One page of the booking data | No |
| validationError | string | Error message from the service provider | No |
| bookingFee | object | Booking fee data, including tax information | No |
| termConditionURL | string | The URL to the terms and conditions of the service provider | No |

Additional properties are allowed.

7.4.2.2.1 BookingDataResponse.serviceHeader

Meta data for the booking process

- **Type:** object
- **Required:** No

7.4.2.2.2 BookingDataResponse.serviceFormPage

One page of the booking data

- **Type:** object
- **Required:** No

7.4.2.2.3 BookingDataResponse.validationError

Error message from the service provider

- **Type:** string
- **Required:** No

7.4.2.2.4 BookingDataResponse.bookingFee

Booking fee data, including tax information

- **Type:** object
- **Required:** No

7.4.2.2.5 BookingDataResponse.termConditionURL

The URL to the terms and conditions of the service provider

- **Type:** string
- **Required:** No
- **Format:** URI

7.4.2.3 BookingFee

Booking fee data, including tax information

Properties

| | Type | Description | Required |
|------------------|---------------|--|----------|
| preTaxFee | number | Pre-tax fee | Yes |
| taxRate | number | Tax rate | Yes |
| currency | string | Currency of transaction (ISO-4217 three-letter format, e.g. USD, EUR, CNY) | Yes |

Additional properties are allowed.

7.4.2.3.1 BookingFee.preTaxFee

Pre-tax fee

- **Type:** number
- **Required:** Yes

7.4.2.3.2 BookingFee.taxRate

Tax rate

- **Type:** number
- **Required:** Yes

7.4.2.3.3 BookingFee.currency

Currency of transaction (ISO-4217 three-letter format, e.g. USD, EUR, CNY)

- **Type:** string
- **Required:** Yes

7.4.2.4 BookingOverview

booking overview data

Properties

| | Type | Description | Required |
|----------------------|---------------|---|----------|
| serviceHeader | object | Meta data for the booking process | No |
| serviceForm | object | Complete booking data | No |
| bookingFee | object | Booking fee data, including tax information | No |
| bookingStatus | object | Booking status | No |

Additional properties are allowed.

7.4.2.4.1 BookingOverview.serviceHeader

Meta data for the booking process

- **Type:** object
- **Required:** No

7.4.2.4.2 BookingOverview.serviceForm

Complete booking data

- **Type:** object
- **Required:** No

7.4.2.4.3 BookingOverview.bookingFee

Booking fee data, including tax information

- **Type:** object
- **Required:** No

7.4.2.4.4 BookingOverview.bookingStatus

Booking status

- **Type:** object
- **Required:** No

7.4.2.5 BookingStatus

Booking status

Properties

| | Type | Description | Required |
|----------------------|----------------|---|----------|
| bookingStatus | integer | Number representing the booking status (100: booking does not exist, 101: no reservation made yet, 102: reserved, 200: all booking steps completed, 999: registered, 899: canceled) | Yes |

Additional properties are allowed.

7.4.2.5.1 BookingStatus.bookingStatus

Number representing the booking status (100: booking does not exist, 101: no reservation made yet, 102: reserved, 200: all booking steps completed, 999: registered, 899: canceled)

- **Type:** integer
- **Required:** Yes
- **Allowed values:** 100, 101, 102, 200, 999, 899

7.4.2.6 ServiceBookingDataRequest

The service booking request data, with data in key-value form defined by and received from your selected payment provider

Properties

| | Type | Description | Required |
|------------------------|-----------------|-----------------------------------|----------|
| dataPayment | array[] | | No |
| serviceHeader | object | Meta data for the booking process | No |
| serviceFormPage | object | One page of the booking data | No |

Additional properties are allowed.

7.4.2.6.1 [ServiceBookingDataRequest.dataPayment](#)

- **Type:** array[]
- **Required:** No

7.4.2.6.2 [ServiceBookingDataRequest.serviceHeader](#)

Meta data for the booking process

- **Type:** object
- **Required:** No

7.4.2.6.3 [ServiceBookingDataRequest.serviceFormPage](#)

One page of the booking data

- **Type:** object
- **Required:** No

7.4.2.7 [ServiceElement](#)

Booking data for a booking element

Properties

| | Type | Description | Required |
|------------------------|----------------|---|----------|
| id | object | Unique id of the element | Yes |
| elementType | string | Type of the element | No |
| valueDefinition | string | Definition of the element. Format: [Description; Supplement] Supplement is only used for the selectList and contains a comma separated list of list entries | No |
| value | string | Field input from the customer | No |
| descriptionText | string | Description text which explains the expected input to the customer | No |
| editable | boolean | Defines whether the field is editable or not | No |
| contentCategory | string | Category for the enrichment with user/session specific values (e.g. firstName, FamilyName, fullName, street, ...) | No |
| contentKey | string | Modification key for the content category (e.g. departure: the departure time of a flight is used as enrichment value) | No |

| | | | |
|---------------------|----------------|--|----|
| contentValue | string | Modifier for the content key (e.g. for departure, a value of -60 means 60 minutes prior to departure time, for Term and Condition a uri to them) | No |
| mandatory | boolean | Defines whether the element is mandatory or not | No |
| errorText | string | Contains an error message | No |

Additional properties are allowed.

7.4.2.7.1 `ServiceElement.id`

Unique id of the element

- **Type:** object
- **Required:** Yes

7.4.2.7.2 `ServiceElement.elementType`

Type of the element

- **Type:** string
- **Required:** No
- **Allowed values:** "text", "textbox", "number", "date", "time", "selectList", "checkbox", "image", "telephone"

7.4.2.7.3 `ServiceElement.valueDefinition`

Definition of the element. Format: [Description; Supplement] Supplement is only used for the selectList and contains a comma separated list of list entries

- **Type:** string
- **Required:** No

7.4.2.7.4 `ServiceElement.value`

Field input from the customer

- **Type:** string
- **Required:** No

7.4.2.7.5 `ServiceElement.descriptionText`

Description text which explains the expected input to the customer

- **Type:** string
- **Required:** No

7.4.2.7.6 `ServiceElement.editable`

Defines whether the field is editable or not

- **Type:** boolean
- **Required:** No

7.4.2.7.7 ServiceElement.contentCategory

Category for the enrichment with user/session specific values (e.g. firstName, FamilyName, fullName, street, ...)

- **Type:** string
- **Required:** No
- **Allowed values:** "gender", "firstName", "familyName", "fullName", "street", "zip", "city", "country", "birthday", "email", "tel", "date", "time", "airline", "flightNr"

7.4.2.7.8 ServiceElement.contentKey

Modification key for the content category (e.g. departure: the departure time of a flight is used as enrichment value)

- **Type:** string
- **Required:** No
- **Allowed values:** "departure", "arrival", "TermCondition"

7.4.2.7.9 ServiceElement.contentValue

Modifier for the content key (e.g. for departure, a value of -60 means 60 minutes prior to departure time, for Term and Condition a uri to them)

- **Type:** string
- **Required:** No

7.4.2.7.10 ServiceElement.mandatory

Defines whether the element is mandatory or not

- **Type:** boolean
- **Required:** No

7.4.2.7.11 ServiceElement.errorText

Contains an error message

- **Type:** string
- **Required:** No

7.4.2.8 ServiceForm

Complete booking data

Properties

| | Type | Description | Required |
|-------------------------|----------------|--------------------------|----------|
| id | object | Unique id of the element | Yes |
| serviceFormPages | array[] | | Yes |

Additional properties are allowed.

7.4.2.8.1 ServiceForm.id

Unique id of the element

- **Type:** object
- **Required:** Yes

7.4.2.8.2 ServiceForm.serviceFormPages

- **Type:** array[]
- **Required:** Yes

7.4.2.9 ServiceFormElement

Element within a service form page

Properties

| | Type | Description | Required |
|------------------------|-----------------|--------------------------------|----------|
| id | object | Unique ID of the element | Yes |
| title | string | The title of the element | Yes |
| subtitle | string | The subtitle of the element | No |
| footerText | string | The footer text of the element | No |
| serviceElements | object[] | | No |

Additional properties are allowed.

7.4.2.9.1 ServiceFormElement.id

Unique ID of the element

- **Type:** object
- **Required:** Yes

7.4.2.9.2 ServiceFormElement.title

The title of the element

- **Type:** string
- **Required:** Yes

7.4.2.9.3 ServiceFormElement.subtitle

The subtitle of the element

- **Type:** string
- **Required:** No

7.4.2.9.4 ServiceFormElement.footerText

The footer text of the element

- **Type:** string
- **Required:** No

7.4.2.9.5 ServiceFormElement.serviceElements

- **Type:** object[]
- **Required:** No

7.4.2.10 ServiceFormPage

One page of the booking data

Properties

| | Type | Description | Required |
|----------------------------|-----------------|--|----------|
| id | object | Unique id of the element | Yes |
| title | string | The title of the booking page | Yes |
| wizardStep | integer | Current wizard step (i.e. page number) | Yes |
| serviceFormElements | object[] | | Yes |

Additional properties are allowed.

7.4.2.10.1 ServiceFormPage.id

Unique id of the element

- **Type:** object
- **Required:** Yes

7.4.2.10.2 ServiceFormPage.title

The title of the booking page

- **Type:** string
- **Required:** Yes

7.4.2.10.3 ServiceFormPage.wizardStep

Current wizard step (i.e. page number)

- **Type:** integer
- **Required:** Yes

7.4.2.10.4 ServiceFormPage.serviceFormElements

- **Type:** object[]
- **Required:** Yes

7.4.2.11 ServiceHeader

Meta data for the booking process

Properties

| | Type | Description | Required |
|--------------------|---------------|----------------------------------|----------|
| serviceID | object | Sequential number of the service | Yes |
| description | string | Description of the service | No |

| | | | |
|--------------------------|----------------|---|----|
| bookingID | object | Unique ID of the booking action | No |
| extBookingID | string | Booking ID of the Service Provider (external reference) | No |
| bookingStatus | object | Booking status | No |
| currentWizardStep | integer | Current step in the booking process | No |
| paymentURL | string | The URL to the payment provider, only available when bookingStatus is ready for payment | No |

Additional properties are allowed.

7.4.2.11.1 `ServiceHeader.serviceID`

Sequential number of the service

- **Type:** `object`
- **Required:** Yes

7.4.2.11.2 `ServiceHeader.description`

Description of the service

- **Type:** `string`
- **Required:** No

7.4.2.11.3 `ServiceHeader.bookingID`

Unique ID of the booking action

- **Type:** `object`
- **Required:** No

7.4.2.11.4 `ServiceHeader.extBookingID`

Booking ID of the Service Provider (external reference)

- **Type:** `string`
- **Required:** No

7.4.2.11.5 `ServiceHeader.bookingStatus`

Booking status

- **Type:** `object`
- **Required:** No

7.4.2.11.6 `ServiceHeader.currentWizardStep`

Current step in the booking process

- **Type:** `integer`
- **Required:** No

7.4.2.11.7 ServiceHeader.paymentURL

The URL to the payment provider, only available when bookingStatus is ready for payment

- **Type:** string
- **Required:** No
- **Format:** uri

7.5 Image

7.5.1 Models

7.5.1.1 Image

Image file - in different resolutions to address different devices and device types

Properties

| | Type | Description | Required |
|---------------|---------------|----------------------------|----------|
| low | string | Image in low resolution | No |
| medium | string | Image in medium resolution | No |
| high | string | Image in high resolution | No |
| native | string | Native resoution of image | No |

Additional properties are allowed.

7.5.1.1.1 Image.low

Image in low resolution

- **Type:** string
- **Required:** No
- **Format:** url

7.5.1.1.2 Image.medium

Image in medium resolution

- **Type:** string
- **Required:** No
- **Format:** url

7.5.1.1.3 Image.high

Image in high resolution

- **Type:** string
- **Required:** No
- **Format:** url

7.5.1.1.4 Image.native

Native resoution of image

- **Type:** string
- **Required:** No
- **Format:** url

7.6 RestBase

7.6.1 Models

7.6.1.1 Address

An address following the convention of <http://microformats.org/wiki/hcard>

Properties

| | Type | Description | Required |
|-------------------------|---------------|----------------------------------|----------|
| post-office-box | string | The post office box | No |
| extended-address | string | The extended address (Suite 207) | No |
| street-address | string | The street address (665 3rd St.) | No |
| locality | string | The locality (San Francisco) | No |
| region | string | The region (CA) | No |
| postal-code | string | The postal code (94107) | No |
| country-name | string | The country's name (U.S.A.) | No |
| country-tag | string | The country's 2 letter code (US) | No |

Additional properties are allowed.

7.6.1.1.1 Address.post-office-box

The post office box

- **Type:** string
- **Required:** No

7.6.1.1.2 Address.extended-address

The extended address (Suite 207)

- **Type:** string
- **Required:** No

7.6.1.1.3 Address.street-address

The street address (665 3rd St.)

- **Type:** string
- **Required:** No

7.6.1.1.4 Address.locality

The locality (San Francisco)

- **Type:** string

- **Required:** No

7.6.1.1.5 Address.region

The region (CA)

- **Type:** string
- **Required:** No

7.6.1.1.6 Address.postal-code

The postal code (94107)

- **Type:** string
- **Required:** No

7.6.1.1.7 Address.country-name

The country's name (U.S.A.)

- **Type:** string
- **Required:** No

7.6.1.1.8 Address.country-tag

The country's 2 letter code (US)

- **Type:** string
- **Required:** No

7.6.1.2 Barcode

Definition of barcodes to be shown to the user

Properties

| | Type | Description | Required |
|----------------|---------------|--|----------|
| type | string | | No |
| payload | string | The content to be converted into a barcode | No |

Additional properties are allowed.

7.6.1.2.1 Barcode.type

- **Type:** string
- **Required:** No
- **Allowed values:** "EAN13", "PDF417", "AZTEK", "QR"

7.6.1.2.2 Barcode.payload

The content to be converted into a barcode

- **Type:** string
- **Required:** No

7.6.1.3 ResponseMsg

Properties

| | Type | Description | Required |
|------------|---------------|-------------|----------|
| msg | string | | Yes |

Additional properties are allowed.

7.6.1.3.1 ResponseMsg.msg

- **Type:** string
- **Required:** Yes

7.7 Service

7.7.1 Interfaces

7.7.1.1 API for Services API documentation version v1

<https://{serverName}/{appName}-{version}>

7.7.1.1.1 /detail/{serviceID}

[/detail/{serviceID}](#)

- **get:** Returns detailed information for a specific service. The language has to be given as parameter for the selection in the data base.

[/detail/{serviceID}/{locationID}](#)

- **get:** Returns detailed information for a specific service. The language has to be given as parameter for the selection in the data base.

7.7.1.1.2 /search/{airportID}

[/search/{airportID}](#)

- **get:** Returns detailed information as a list for the search. The language has to be given as parameter for the selection in the data base.

7.7.1.1.3 /topServices/{airportID}

[/topServices/{airportID}](#)

- **get:** Returns a list of available top services for the given airport and user identified by oauth-token. The top services can differ for different users and is context based. The list items have to be ordered. There should be only maximum 4 top services. The language has to be given as parameter for the selection in the database.

7.7.1.1.4 /serviceCategories/{airportID}

/serviceCategories/{airportID}

- **get:** Returns a list of available service categories for a specific airport. The language has to be given as parameter for the selection in the data base.

7.7.1.1.5 /category/{categoryId}

/category/{categoryId}

- **get:** Returns a list of available service categories for a specific airport. The language has to be given as parameter for the selection in the data base.

7.7.2 Models

7.7.2.1 LocationFull

Properties

| | Type | Description | Required |
|----------------------|-----------------|---|----------|
| x | number | The x coordinate of the location | Yes |
| locationId | object | The location ID | Yes |
| y | number | The y coordinate of the location | Yes |
| z | number | The z coordinate of the location | Yes |
| humanReadable | string | Human readable location name like terminal 2 or terminal 1 | Yes |
| area | string | Area identification like room numbers or the name of corridors | Yes |
| externalId | string | External location ID | No |
| description | string | The description of the location | No |
| mapImage | object | Image file - in different resolutions to address different devices and device types | No |
| openingHours | object[] | The opening of the services at this dedicated location | No |

Additional properties are allowed.

7.7.2.1.1 LocationFull.x

The x coordinate of the location

- **Type:** number
- **Required:** Yes

7.7.2.1.2 LocationFull.locationId

The location ID

- **Type:** object

- **Required:** Yes

7.7.2.1.3 LocationFull.y

The y coordinate of the location

- **Type:** number
- **Required:** Yes

7.7.2.1.4 LocationFull.z

The z coordinate of the location

- **Type:** number
- **Required:** Yes

7.7.2.1.5 LocationFull.humanReadable

Human readable location name like terminal 2 or terminal 1

- **Type:** string
- **Required:** Yes

7.7.2.1.6 LocationFull.area

Area identification like room numbers or the name of corridors

- **Type:** string
- **Required:** Yes

7.7.2.1.7 LocationFull.externalId

External location ID

- **Type:** string
- **Required:** No

7.7.2.1.8 LocationFull.description

The description of the location

- **Type:** string
- **Required:** No

7.7.2.1.9 LocationFull.mapImage

Image file - in different resolutions to address different devices and device types

- **Type:** object
- **Required:** No

7.7.2.1.10 LocationFull.openingHours

The opening of the services at this dedicated location

- **Type:** object[]

- **Required:** No

7.7.2.2 ProviderFull

Properties

| | Type | Description | Required |
|----------------|---------------|--|----------|
| id | object | The unique identifier of the provider | Yes |
| name | string | The name of the provider | Yes |
| email | string | The e-mail address of the provider | No |
| website | string | The website of the provider | No |
| phone | string | The phone number of the provider | No |
| fax | string | The fax number of the provider | No |
| logo | object | Image file - in different resolutions to address different devices and device types | No |
| contact | object | An address following the convention of http://microformats.org/wiki/hcard | Yes |

Additional properties are allowed.

7.7.2.2.1 ProviderFull.id

The unique identifier of the provider

- **Type:** object
- **Required:** Yes

7.7.2.2.2 ProviderFull.name

The name of the provider

- **Type:** string
- **Required:** Yes

7.7.2.2.3 ProviderFull.email

The e-mail address of the provider

- **Type:** string
- **Required:** No

7.7.2.2.4 ProviderFull.website

The website of the provider

- **Type:** string
- **Required:** No
- **Format:** uri

7.7.2.2.5 ProviderFull.phone

The phone number of the provider

- **Type:** string
- **Required:** No

7.7.2.2.6 ProviderFull.fax

The fax number of the provider

- **Type:** string
- **Required:** No

7.7.2.2.7 ProviderFull.logo

Image file - in different resolutions to address different devices and device types

- **Type:** object
- **Required:** No

7.7.2.2.8 ProviderFull.contact

An address following the convention of <http://microformats.org/wiki/hcard>

- **Type:** object
- **Required:** Yes

7.7.2.3 7.2.3. ServiceFull

Service with full details

Properties

| | Type | Description | Required |
|-------------------------|----------------|--|----------|
| title | string | The title of the service item. The title will be shown in the list of services and is the header of the service detail. This text is required otherwise the service will not be shown in the list. | Yes |
| subTitle | string | The sub title of the service item. This text will be shown below the service title. | No |
| icon | object | Image file - in different resolutions to address different devices and device types | No |
| shortDescription | string | The short description of the service item. This text will be shown in the first pageview of the service item after the title and the subTitle. | No |
| description | string | The long description of the service item. This text will be shown in the details of the service item. | No |
| isBookable | boolean | True if the service can be booked | No |

| | | | |
|------------------------------------|-----------------|--|-----|
| serviceBulletpoints | object[] | The services (key features) here bulletpoints of the service item. The order of each element is defined over all key features. | No |
| serviceTables | object[] | The services (key features) here table of the service item. The order of each element is defined over all key features. | No |
| serviceTexts | object[] | The services (key features) here bulletpoints of the service item. The order of each element is defined over all key features. | No |
| titleImage | object | Image file - in different resolutions to address different devices and device types | No |
| titleImage_small | object | Image file - in different resolutions to address different devices and device types | No |
| descriptionImage_vertical | object | Image file - in different resolutions to address different devices and device types | No |
| descriptionImage_horizontal | object | Image file - in different resolutions to address different devices and device types | No |
| downloads | string[] | The downloads area of the service. | No |
| specials | object[] | The different specials for the service. The title of the special will be shown in the service details. The details of the special can be loaded by the unique identifier of the special. If the list is empty the whole section will disappear in the service details. | No |
| provider | object | | No |
| serviceId | object | The unique identifier of the service | Yes |
| airportId | object | The unique identifier of the airport the service belongs to | Yes |
| locations | object[] | The different points of interest of the service. | No |

Additional properties are allowed.

7.7.2.3.1 ServiceFull.title

The title of the service item. The title will be shown in the list of services and is the header of the service detail. This text is required otherwise the service will not be shown in the list.

- **Type:** string
- **Required:** Yes

7.7.2.3.2 ServiceFull.subTitle

The sub title of the service item. This text will be shown below the service title.

- **Type:** string
- **Required:** No

7.7.2.3.3 ServiceFull.icon

Image file - in different resolutions to address different devices and device types

- **Type:** object
- **Required:** No

7.7.2.3.4 ServiceFull.shortDescription

The short description of the service item. This text will be shown in the first pageview of the service item after the title and the subTitle.

- **Type:** string
- **Required:** No

7.7.2.3.5 ServiceFull.description

The long description of the service item. This text will be shown in the details of the service item.

- **Type:** string
- **Required:** No

7.7.2.3.6 ServiceFull.isBookable

True if the service can be booked

- **Type:** boolean
- **Required:** No

7.7.2.3.7 ServiceFull.serviceBulletpoints

The services (key features) here bulletpoints of the service item. The order of each element is defined over all key features.

- **Type:** object[]
- **Required:** No

7.7.2.3.8 ServiceFull.serviceTables

The services (key features) here table of the service item. The order of each element is defined over all key features.

- **Type:** object[]
- **Required:** No

7.7.2.3.9 ServiceFull.serviceTexts

The services (key features) here bulletpoints of the service item. The order of each element is defined over all key features.

- **Type:** object[]
- **Required:** No

7.7.2.3.10 ServiceFull.titleImage

Image file - in different resolutions to address different devices and device types

- **Type:** object
- **Required:** No

7.7.2.3.11 ServiceFull.titleImage_small

Image file - in different resolutions to address different devices and device types

- **Type:** object
- **Required:** No

7.7.2.3.12 ServiceFull.descriptionImage_vertical

Image file - in different resolutions to address different devices and device types

- **Type:** object
- **Required:** No

7.7.2.3.13 ServiceFull.descriptionImage_horizontal

Image file - in different resolutions to address different devices and device types

- **Type:** object
- **Required:** No

7.7.2.3.14 ServiceFull.downloads

The downloads area of the service.

- **Type:** string[]
- **Required:** No

7.7.2.3.15 ServiceFull.specials

The different specials for the service. The title of the special will be shown in the service details. The details of the special can be loaded by the unique identifier of the special. If the list is empty the whole section will disappear in the service details.

- **Type:** object[]
- **Required:** No

7.7.2.3.16 ServiceFull.provider

- **Type:** object
- **Required:** No

7.7.2.3.17 ServiceFull.serviceId

The unique identifier of the service

- **Type:** object
- **Required:** Yes

7.7.2.3.18 ServiceFull.airportId

The unique identifier of the airport the service belongs to

- **Type:** object
- **Required:** Yes

7.7.2.3.19 ServiceFull.locations

The different points of interest of the service.

- **Type:** object[]
- **Required:** No

7.7.2.4 ServiceShort

Properties

| | Type | Description | Required |
|------------------|-----------------|---|----------|
| serviceId | object | The unique identifier of the service | Yes |
| airportId | object | The unique identifier of the airport the service belongs to | Yes |
| locations | object[] | The different points of interest of the service. | No |

Additional properties are allowed.

7.7.2.4.1 ServiceShort.serviceId

The unique identifier of the service

- **Type:** object
- **Required:** Yes

7.7.2.4.2 ServiceShort.airportId

The unique identifier of the airport the service belongs to

- **Type:** object
- **Required:** Yes

7.7.2.4.3 ServiceShort.locations

The different points of interest of the service.

- **Type:** object[]
- **Required:** No

7.7.2.5 ServiceBulletpoint

Properties

| | Type | Description | Required |
|-------------------|-----------------|--|----------|
| title | string | The title of the bulletpoints. This is the first header element in the pageview. | Yes |
| order | integer | The order number in the complete list of key features. | Yes |
| headerText | string | The sub title of the bulletpoints. This text is shown after the title. | No |
| footerText | string | The footer text of the bulletpoints. This text is shown after the enumeration of the bulletpoints. | No |
| elements | string[] | The bulletpoint. Each element of the list has to be specified as one bulletpoint (element). | Yes |

Additional properties are allowed.

7.7.2.5.1 ServiceBulletpoint.title

The title of the bulletpoints. This is the first header element in the pageview.

- **Type:** string
- **Required:** Yes

7.7.2.5.2 ServiceBulletpoint.order

The order number in the complete list of key features.

- **Type:** integer
- **Required:** Yes

7.7.2.5.3 ServiceBulletpoint.headerText

The sub title of the bulletpoints. This text is shown after the title.

- **Type:** string
- **Required:** No

7.7.2.5.4 ServiceBulletpoint.footerText

The footer text of the bulletpoints. This text is shown after the enumeration of the bulletpoints.

- **Type:** string
- **Required:** No

7.7.2.5.5 ServiceBulletpoint.elements

The bulletpoint. Each element of the list has to be specified as one bulletpoint (element).

- **Type:** string[]
- **Required:** Yes

7.7.2.6 ServiceCategoryFull

Properties

| | Type | Description | Required |
|-------------------------|---------------|--|----------|
| categoryType | string | Type of the category (BASECATEGORY: root, SUBCATEGORY: level below root, SERVICELIST: list of services, SERVICEPAGEVIEW: page of services) | No |
| serviceList | object | The list of elements in the category | Yes |
| categoryList | object | The list of elements in the category | No |
| id | object | The unique identifier of the service category | Yes |
| parentCategoryID | object | The ID of the parent category | Yes |
| title | string | The title of the service category. The title is shown in the category list. | Yes |

Additional properties are allowed.

7.7.2.6.1 ServiceCategoryFull.categoryType

Type of the category (BASECATEGORY: root, SUBCATEGORY: level below root, SERVICELIST: list of services, SERVICEPAGEVIEW: page of services)

- **Type:** string
- **Required:** No
- **Allowed values:** "BASECATEGORY", "SUBCATEGORY", "SERVICELIST", "SERVICEPAGEVIEW"

7.7.2.6.2 ServiceCategoryFull.serviceList

The list of elements in the category

- **Type:** object
- **Required:** Yes

7.7.2.6.3 ServiceCategoryFull.categoryList

The list of elements in the category

- **Type:** object
- **Required:** No

7.7.2.6.4 ServiceCategoryFull.id

The unique identifier of the service category

- **Type:** object
- **Required:** Yes

7.7.2.6.5 ServiceCategoryFull.parentCategoryID

The ID of the parent category

- **Type:** object
- **Required:** Yes

7.7.2.6.6 ServiceCategoryFull.title

The title of the service category. The title is shown in the category list.

- **Type:** string
- **Required:** Yes

7.7.2.7 ServiceCategoryShort

Properties

| | Type | Description | Required |
|-------------------------|---------------|---|----------|
| id | object | The unique identifier of the service category | Yes |
| parentCategoryID | object | The ID of the parent category | Yes |
| title | string | The title of the service category. The title is shown in the category list. | Yes |

Additional properties are allowed.

7.7.2.7.1 ServiceCategoryShort.id

The unique identifier of the service category

- **Type:** object
- **Required:** Yes

7.7.2.7.2 ServiceCategoryShort.parentCategoryID

The ID of the parent category

- **Type:** object
- **Required:** Yes

7.7.2.7.3 ServiceCategoryShort.title

The title of the service category. The title is shown in the category list.

- **Type:** string
- **Required:** Yes

7.7.2.8 ServiceCategoryList

The list of elements in the category

Properties

| | Type | Description | Required |
|-------------------------------|-----------------|-------------------------------------|----------|
| serviceCategoryParents | object[] | The list of all service categories. | No |

Additional properties are allowed.

7.7.2.8.1 ServiceCategoryList.serviceCategoryParents

The list of all service categories.

- **Type:** object[]
- **Required:** No

7.7.2.9 ServiceList

The list of elements in the category

Properties

| | Type | Description | Required |
|-----------------|-----------------|-------------|----------|
| services | object[] | | No |

Additional properties are allowed.

7.7.2.9.1 ServiceList.services

- **Type:** object[]
- **Required:** No

7.7.2.10 ServiceTable

Properties

| | Type | Description | Required |
|-------------------|-----------------|---|----------|
| title | string | The title of the table for the service features. This is the first header element of this con. | Yes |
| order | integer | The order number in the complete list of key features. | Yes |
| headerText | string | The sub title of the table for the service features. This text is shown after the title. | No |
| footerText | string | The footer text of the table for the service features. This text is shown after the table view. | No |
| position | string | The position of the table in the page view. This can be used for the design of the page view. If no position is specified the order conforms the returned list order. | No |
| rows | object[] | The rows of the table. The table supports only 2 column values. The rows will be in the order of the list. | Yes |

Additional properties are allowed.

7.7.2.10.1 ServiceTable.title

The title of the table for the service features. This is the first header element of this con.

- **Type:** string
- **Required:** Yes

7.7.2.10.2 ServiceTable.order

The order number in the complete list of key features.

- **Type:** integer
- **Required:** Yes

7.7.2.10.3 ServiceTable.headerText

The sub title of the table for the service features. This text is shown after the title.

- **Type:** string
- **Required:** No

7.7.2.10.4 ServiceTable.footerText

The footer text of the table for the service features. This text is shown after the table view.

- **Type:** string
- **Required:** No

7.7.2.10.5 ServiceTable.position

The position of the table in the page view. This can be used for the design of the page view. If no position is specified the order conforms the returned list order.

- **Type:** string
- **Required:** No

7.7.2.10.6 ServiceTable.rows

The rows of the table. The table supports only 2 column values. The rows will be in the order of the list.

- **Type:** object[]
- **Required:** Yes

7.7.2.11 ServiceText

Properties

| | Type | Description | Required |
|--------------|----------------|---|----------|
| title | string | The title of the free text element. This is the first header element of the container. | Yes |
| order | integer | The order number in the complete list of key features. | Yes |
| text | string | The text of the free text element. This text is shown after the title and is not formatted. | No |

Additional properties are allowed.

7.7.2.11.1 ServiceText.title

The title of the free text element. This is the first header element of the container.

- **Type:** string
- **Required:** Yes

7.7.2.11.2 ServiceText.order

The order number in the complete list of key features.

- **Type:** integer
- **Required:** Yes

7.7.2.11.3 ServiceText.text

The text of the free text element. This text is shown after the title and is not formatted.

- **Type:** string
- **Required:** No

7.7.2.12 SpecialShort

Properties

| | Type | Description | Required |
|--------------------------|---------------|---|----------|
| id | object | The unique identifier of the special | Yes |
| name | string | The title of the special | Yes |
| description | string | The description of the special | No |
| numberOfAvailable | number | The number of available coupons for the offer | No |
| image | object | Image file - in different resolutions to address different devices and device types | No |
| begin | date | The begin date for the special | No |
| end | date | The end date for the special | No |
| coupon | string | The coupon of the special | No |

Additional properties are allowed.

7.7.2.12.1 SpecialShort.id

The unique identifier of the special

- **Type:** object
- **Required:** Yes

7.7.2.12.2 SpecialShort.name

The title of the special

- **Type:** string
- **Required:** Yes

7.7.2.12.3 SpecialShort.description

The description of the special

- **Type:** string
- **Required:** No

7.7.2.12.4 SpecialShort.numberOfAvailable

The number of available coupons for the offer

- **Type:** number
- **Required:** No

7.7.2.12.5 SpecialShort.image

Image file - in different resolutions to address different devices and device types

- **Type:** object
- **Required:** No

7.7.2.12.6 SpecialShort.begin

The begin date for the special

- **Type:** date
- **Required:** No

7.7.2.12.7 SpecialShort.end

The end date for the special

- **Type:** date
- **Required:** No

7.7.2.12.8 SpecialShort.coupon

The coupon of the special

- **Type:** string
- **Required:** No

7.8 Trip

7.8.1 Interfaces

7.8.1.1 API for Trip API documentation version v1

<https://{serverName}/{appName}-{version}>

7.8.1.1.1 /all

/all

- **get (secured):** get a all informations (flights, marked service, last visited services, booked service) which are stored for the user

7.8.1.1.2 FlightByID

[/flight/{tripID}/{flightID}](#)

- **put** (*secured*): Add the flight to the list of the trip
- **delete** (*secured*): remove a flight from the list of the tip

7.8.1.1.3 FlightPNRByID

[/flightPNR/{tripID}/{flightID}](#)

- **put** (*secured*): Add the flight to the list of the trip
- **delete** (*secured*): Remove a flight from the list of the tip

7.8.1.1.4 ServiceByID

[/service/{tripID}/{source}/{serviceID}](#)

- **put** (*secured*): Add the service to the service list of the trip
- **delete** (*secured*): Delete the service to the service list of the trip

7.8.1.1.5 /createTrip

[/createTrip](#)

- **put** (*secured*): Create a trip

7.8.1.1.6 /trip

[/trip](#)

- **put** (*secured*): Update a trip

[/trip/{tripId}](#)

- **delete** (*secured*): Delete the trip

7.8.2 Models

7.8.2.1 CreateTripInfo

The object to create a new trip

Properties

| | Type | Description | Required |
|------------------|---------------|---|----------|
| startDate | string | The beginning of a trip. | Yes |
| endDate | string | The end of a trip. | Yes |
| name | string | The name (e.g. self-descriptive) of a trip. | Yes |
| role | string | User role that owns this set of trip data | Yes |

Additional properties are allowed.

7.8.2.1.1 CreateTripInfo.startDate

The beginning of a trip.

- **Type:** string
- **Required:** Yes
- **Format:** date-time

7.8.2.1.2 CreateTripInfo.endDate

The end of a trip.

- **Type:** string
- **Required:** Yes
- **Format:** date-time

7.8.2.1.3 CreateTripInfo.name

The name (e.g. self-descriptive) of a trip.

- **Type:** string
- **Required:** Yes

7.8.2.1.4 CreateTripInfo.role

User role that owns this set of trip data

- **Type:** string
- **Required:** Yes
- **Allowed values:** "self", "pickup", "serviceProvider"

7.8.2.2 PNR

Properties

| | Type | Description | Required |
|------------|---------------|----------------------------------|----------|
| pnr | string | The Passenger Name Record string | Yes |

Additional properties are allowed.

7.8.2.2.1 PNR.pnr

The Passenger Name Record string

- **Type:** string
- **Required:** Yes

7.8.2.3 Trip

The Trip Object

Properties

| | Type | Description | Required |
|------------------|-----------------|---|----------|
| flights | object[] | The list of all flights contained in a trip. | No |
| services | object[] | The list of all services contained in a trip. | No |
| tripID | object | The ID of the trip. | Yes |
| startDate | string | The beginning of a trip. | Yes |
| endDate | string | The end of a trip. | Yes |
| name | string | The name (e.g. self-descriptive) of a trip. | Yes |
| role | string | User role that owns this set of trip data | Yes |

Additional properties are allowed.

7.8.2.3.1 Trip.flights

The list of all flights contained in a trip.

- **Type:** **object[]**
- **Required:** No

7.8.2.3.2 Trip.services

The list of all services contained in a trip.

- **Type:** **object[]**
- **Required:** No

7.8.2.3.3 Trip.tripID

The ID of the trip.

- **Type:** **object**
- **Required:** Yes

7.8.2.3.4 Trip.startDate

The beginning of a trip.

- **Type:** **string**
- **Required:** Yes
- **Format:** date-time

7.8.2.3.5 Trip.endDate

The end of a trip.

- **Type:** **string**
- **Required:** Yes
- **Format:** date-time

7.8.2.3.6 Trip.name

The name (e.g. self-descriptive) of a trip.

- **Type:** **string**

- **Required:** Yes

7.8.2.3.7 Trip.role

User role that owns this set of trip data

- **Type:** string
- **Required:** Yes
- **Allowed values:** "self", "pickup", "serviceProvider"

7.8.2.4 TripInfo

The object to update a trip

Properties

| | Type | Description | Required |
|------------------|---------------|---|----------|
| tripID | object | The ID of the trip. | Yes |
| startDate | string | The beginning of a trip. | Yes |
| endDate | string | The end of a trip. | Yes |
| name | string | The name (e.g. self-descriptive) of a trip. | Yes |
| role | string | User role that owns this set of trip data | Yes |

Additional properties are allowed.

7.8.2.4.1 TripInfo.tripID

The ID of the trip.

- **Type:** object
- **Required:** Yes

7.8.2.4.2 TripInfo.startDate

The beginning of a trip.

- **Type:** string
- **Required:** Yes
- **Format:** date-time

7.8.2.4.3 TripInfo.endDate

The end of a trip.

- **Type:** string
- **Required:** Yes
- **Format:** date-time

7.8.2.4.4 TripInfo.name

The name (e.g. self-descriptive) of a trip.

- **Type:** string

- **Required:** Yes

7.8.2.4.5 TripInfo.role

User role that owns this set of trip data

- **Type:** string
- **Required:** Yes
- **Allowed values:** "self", "pickup", "serviceProvider"

7.8.2.5 TripList

A list of trips

8 Management and Further Development of the Standard

The ACI ACRIS Seamless Travel standard consists of three components:

1. The Business Requirement Document
2. The Implementation Guideline
3. Supporting files that contain implementation details for the interfaces and data models (RAML, JSON Schema)

As these three files build on one another, they are not to be updated without reflecting these changes in the others. Any change in the implementation guidelines for example would need to be reflected in the supporting files as well.

Version 1.0 was approved by the ACI World Airport IT Standing Committee (WAITSC).

For the further development of Seamless Travel a transparent a fast approach towards changes is intended:

Minor Changes

If show-stopping bugs, discrepancies, misspellings, etc. are found the most recent WAITSC-approved version of this standard, there is a fast track that allows rapid troubleshooting. These changes need to be brought up to the ACRIS technical subgroup for approval. If the subgroup agrees to adopt these changes, a new minor release can be created that keeps its draft status, but is released for implementation.

Naming convention: 1.0, 1.1, ...

Major Changes

New features, major renaming or other changes that affect the standard and its implementers are supposed to be developed within a working group and to be submitted to the WAITSC for approval. Unapproved changes from prior minor changes should be merged into these versions.

Naming convention: 1.x, 2.x, ...

9 Points of Contact

Organizational Inquiries

This standard was developed within the ACI ACRIS Seamless Travel Working Group. For all organizational inquiries please get in contact with:

Airport Council International (ACI) World

Serge Yonke Nguewo

Senior Manager, Facilitation and IT

800 rue du Square Victoria
Montréal, Québec H4Z 1G8
Canada

SYonkeNguewo@aci.aero

Tel: +1 514 373 1239

Technical Inquiries

Regarding technical questions there currently is no formal support of any kind. Since Munich Airport was heavily involved in the development of this standard and has a running instance of Seamless Travel in production, feel free to send your inquiries to the Munich team – however there is no guarantee to receive quick response (as in commercial support).
